

ABSTRACT

A betting system is disclosed comprising a play slip used for charting, locating, monitoring, evaluating, managing, and monitoring numbers (digits) over a specific number of previous games up to a time of making selections for placing a bet; in combination, a matching play slip chart is also used for charting, locating monitoring, evaluating, managing, and selecting numbers over a specific number of previous games up to a time of making selections for placing a bet. Both play slip and play slip chart have at least one board containing a plurality of numbers divided into a plurality of groups of numbers called positions. The positions are further divided into a plurality of groups of numbers called zones. At least one board of both play slip and play slip chart is marked with the use of one or more landmark lines, which is adjusted, from time to time, to define active and inactive zones over a specific number of previous games up to a time of selecting numbers for placing a bet. The play slip chart having active and inactive zones is used to locate and monitor frequently drawn numbers, numbers drawn as companions, skips between frequently drawn numbers, and other patterns over a specific number of previous games, as related to numbers on said play slip up to a time of selecting numbers for placing a bet. In addition, the aforementioned betting system is disclosed having a play slip and play slip chart with at least one fixed landmark line to emphasize active and inactive zones used for charting, locating, evaluating, managing, selecting, and monitoring, numbers drawn over a specific number of previous games up to a time of selecting numbers for placing a bet; wherein, a player with impaired or diminishing vision can better locate numbers on said board and better see a particular number's activity and inactivity on a particular day for a specific number of previous games, as related to numbers on said play slip and play slip chart up to a time of selecting numbers for placing a bet.
